2.5.1 Domestic Price Calculator API (API=RateV4) - Postage Visibility Updates

1. Summary: Web Tools will update the RateV4 API to allow integrators the option to return a streamlined breakdown of how postage was calculated for increased visibility.
 - New tags will be eligible to return in the XML response when `<ReturnFees>="True"` is provided in the request.
 - XML response `<Fees>` and `<Attributes>` groups will contain a comprehensive breakdown of how postage was calculated.
 - When `<ReturnFees>="False"` is indicated in the XML request (or not supplied), new tags will not return. However, fees will be reflected in the postage returned when applicable.
2. Oversize Updates - When oversize pricing applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as oversized.
 - New indicator with value of "true" (i.e., `<Oversized>="true"`) will return when oversize pricing is reflected in the postage.
 - New indicator will not return if the package is not priced as oversized.
3. Dimensional Weight Updates - When dimensional weight pricing applies to postage, Web Tools will return a new `<Attributes>` grouping with dimensional weight indicators when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced using dimensional weight.
 - New XML response tags eligible to return when `<ReturnFees>="True"` and dimensional weight applies:
 - `<Attributes>`
 - `<Attribute Key="DimensionalWeight" Type="RetailRate">50</Attribute>`
 - `<Attribute Key="DimensionalWeight" Type="CommercialRate">50</Attribute>`
 - `<Attribute Key="DimensionalWeight" Type="CommercialPlusRate">50</Attribute>`
 - `</Attributes>`
 - New dimensional weight indicators will return the dimensional weight value used to calculate postage for each price type.
 - `Attribute Key="DimensionalWeight"` indicates package was priced using dimensional weight value returned.
 - `Type="RetailRate"` indicates postage returned in the `<Rate>` postage tag.
 - Note: any pricing that is NOT an explicitly published Commercial Base (CBP) or Commercial Plus (CPP) will return in this tag (i.e., Retail products or Commercial products such as Parcel Select Ground, Library Mail, and Media Mail etc.).
 - `Type="CommercialRate"` indicates published Commercial Base Pricing (CBP) returned in the `<CommercialRate>` postage tag.
 - `Type="CommercialPlusRate"` indicates published Commercial Plus Pricing (CPP) returned in `<CommercialPlusRate>` postage tag.
 - New dimensional weight indicators will not return if the package is not priced using dimensional weight.
 - The current `<ReturnDimensionalWeight>` optional request tag with "true"/"false" inputs which returns `<DimensionalWeightRate>`, `<DimensionalWeightCommercialRate>`, and `<DimensionalWeightCommercialPlusRate>` tags will remain unchanged.
 - These legacy tags will be deprecated in a future release.
4. Nonmachinable Fee - When Nonmachinable fee applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as Nonmachinable.
 - The new indicator will display the fee amount reflected in the postage returned.
 - The new indicator will not return if the package is not priced as Nonmachinable.
5. Live Animal Transportation Fee - When the Live Animal Transportation fee applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as Live Animal Transportation.

- The new indicator will display the fee amount reflected in the postage returned.
- The new indicator will not return if the package is not priced as Live Animal Transportation.

2.5.2 eVS Domestic Label API (API=eVS) - Postage Visibility Updates

 - New tags eligible to return in the XML response when `<ReturnFees>="True"` is provided in the request.
 - XML response `<Fees>` and `<Attributes>` groups will contain a comprehensive breakdown of how postage was calculated.
 - When `<ReturnFees>="False"` is indicated in the XML request (or not supplied), new tags will not return. However, fees will be reflected in the postage returned when applicable.
2. Oversize Updates - When oversize pricing applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as oversized.
 - New indicator with value of "true" (i.e., `<Oversized>="true"`) will return when oversize pricing is reflected in the postage.
 - New indicator will not return if the package is not priced as oversized.
 - Oversized packages will contain an "OS" (Oversized) value in the Shipping Services File (SSF) D1 pos 37 Rate Indicator field.
3. Dimensional Weight Updates - When dimensional weight pricing applies to postage, Web Tools will return a new `<Attributes>` group with dimensional weight indicators when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced using dimensional weight.
 - New dimensional weight indicator ("DimensionalWeight") will return the dimensional weight value ("50") used to calculate postage.
 - New XML response tags eligible to return when `<ReturnFees>="True"` and dimensional weight applies:
 - `<Attributes>`
 - `<Attribute Key="DimensionalWeight">50</Attribute>`
 - `</Attributes>`
 - New dimensional weight indicator will not return if the package is not priced using dimensional weight.
 - Current dimensional weight tag (i.e., `<DimensionalWeight>`) which displays the dimensional weight value when applicable in the XML response will remain unchanged.
 - This legacy tag will be deprecated in a future release.
4. Nonmachinable Fee - When Nonmachinable fee applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as Nonmachinable.
 - The new indicator will display the fee amount reflected in the postage returned.
 - The new indicator will not return if the package is not priced as Nonmachinable.
 - Packages where the Nonmachinable fee applies to postage will contain the following Shipping Service File (SSF) inputs:
 - D1 pos 57 Surcharge Type:
 - "N1" (Nonmachinable Parcel Surcharge)
 - "S4" (Nonmachinable Letter Surcharge)
 - D1 pos 57 Surcharge Amount will contain the Nonmachinable fee
 - Note: Current logic for eVS Parcel Select Destination Entry and Lightweight (PSDE/PSLW) when `<NextDay>="True"` which requires a Surcharge of "E2" will take precedence in SSF.
5. Live Animal Transportation Fee - When the Live Animal Transportation fee applies to postage, Web Tools will return a new indicator in the XML response `<Fees>` group when `<ReturnFees>="True"` is provided in the request so that an integrator can see their package was priced as Live Animal Transportation.
 - The new indicator will display the fee amount reflected in the postage returned.
 - The new indicator will not return if the package is not priced as Live Animal Transportation.

- Packages where the Live Animal Transportation fee applies to postage will contain the following Shipping Service File (SSF) inputs:
